

Joomla Content Management System

This site is driven by the Joomla Content Management System.

This tool allows easy access to addition / deletion / editing of content on your website.

Joomla itself is free - and can easily be installed with any new server order from Summerland Web Service (or only \$20 once off installation fee for existing customers).

There are a range of online resources which are available for the Joomla - many of these are free, including a variety of design templates, and add-ons, as well as tutorials on how to use MamboServer.

We can also provide training and customization of the Joomla tool for a fee.

This is a link to the main Joomla site, or contact us if you would like to discuss your specific needs.
